I'm a bassist, producer and a dev, so I built a free plugin that gives you studio quality bass tone

Gear

I've been recording bass for 15 years and [I'm also a coder](#), so I put both together and built a simple bass plugin.

The idea was to get that big, pro studio bass sound, the Justin Chancellor and Muse end of things, into the hands of people who don't have the gear or the cash for a pile of expensive kit (ie DSP neurals blah blah)

The beta is free. [Check it out here](#) and [download here](#)

Heads up: I built this on a Mac. The Windows installer should work fine, but if it gives you any grief the plugin files are in there too so you can drop them in manually.

Two asks if you try it:

Bugs and requests go on [the repo as an Issue](#) so I can track them, not in the comments

[Quick feedback goes here](#)

Cheers!

Did you do this or did Claude do this?

  3  Reply ...

jameshgordy OP • 3d ago

Claude built the JUCE plugin and format, but I built the algorithm based on 2 years of sampling, utilising a patent pending spectral analysis process. This is why the IR folder is encrypted.

I also scoped out the frequency bands to allow the warmth and customisation, which is why the fuzz is so saturated. Claude isn't capable of that (believe me, I tried)

Just looking at this now.

Fellow bass player and DAW user.

Hope you like!

Where does the windows installer put it? I'm struggling to find it.

Own-Nefariousness-79 • 4d ago

It is really interesting! Just put it on a track I've been working on. Its easy to add a bit of subtle distortion.

I'll have a good play with this.

jameshgordy OP • 4d ago

Great to hear! Basically if I get enough feedback, I'll make a large more complex version of the plugin, but I also wanted to offer something that was powerful, cpu efficient and not complex, for now at least.

jameshgordy OP • 4d ago

The main thing I'd ask in return is [if you would consider filling survey](#) after playing with it 😊 so I can improve it! No rush though

DeePeeJay69 • 4d ago

How did you program/model the effects and what effects are there? Is it just a gain structure that can move into distortion/color?

⊖ ↑ 4 ↓ 🗨 Reply ...

jameshgordy OP • 4d ago

I used Claude to compile the plugin, but I built the algorithms myself based on extensive sampling and analogue desk profiling. I can't really go into more detail than that for now, but it's a lot more than gain.

For now it's just a good solid clean and fuzz sound (with a few presets) but if well received with feedback I'll aim to expand the effects and slider scope (wit

How did you construct the interface for building a tone? Did you build something pretty standard / similar to a pedal or plugin you like to use?

jameshgordy OP • 3d ago

Honestly I just re-iterated it multiple times until it felt viable for use. It actually started off as a sampler (which I do intend to finish), but this felt the most natural with the elements I wanted to use. I basically just wanted something where I could record my bass clean, turn it on and bam, instant demo/recording quality.

This will work in logic/OS Tahoe? I'm traveling now but will totally try it when I get home.

jameshgordy OP • 3d ago

Should do! I've not yet had any complaints of installations failing

They're the GOATS! One bit of feedback I'm getting is that this maybe doesn't work as well for live signal, only recorded, so please do give me your feedback! Would love to hear.

Does it work on linux too?

⊖ ↑ 1 ↓ Reply ...

jameshgordy OP • 3d ago

I added a linux installer and standalone packages in [v0.1.2](#) - tested with docker, so hopefully should work!

This might be a really dumb question, but can I use this with Garageband or would I need Logic?

1 Reply ...

jameshgordy OP • 4d ago

The macOS installer should install it for you automatically with GarageBand

1 Reply ...

mybrainisfull • 4d ago

Ah, found it. I'm trying it out right now. I'm unfortunately getting what seems like heavy clipping (not sure exactly how to describe it) as if the input signal was way too high. I've tried adjusting every setting I can think of to reduce it, but the only thing that works is soloing the DI. I've tried using my Darkglass Element and iRig inputs, with active and passive basses, but it's not making a difference. Any thoughts?

1 Reply ...

jameshgordy OP • 3d ago

Have you unchecked the fuzz boxes? It does start heavily distorted

1 Reply ...

mybrainisfull • 3d ago

I've tried all of your presets, unchecked all the boxes, adjusted levels (in your plugin, on the bass, on audio interfaces, in Garageband), muted, soloed, the only thing that works without the extreme distortion distortion is the DI channel. I tried rebooting, reinstalling, updating the macos on my M1 to Tahoe 26.5.1. I've even tried installing other plugins to see if it's something with my system, but I can't figure it out. Very weird.

I sincerely appreciate you taking some interest in this and I want to help get it resolved in case it's not just me doing something boneheaded.

jameshgordy OP • 3d ago

It's ok I found the issue - it's to do with the buffer rates Garageband defaults to under the hood - was able to recreate it on my end, pushing fix now - should compile in 10 min - I'll add a link when ready

mybrainisfull • 3d ago

Holy smokes, that was fast! You are awesome, my friend.

1 Reply ...

jameshgordy OP • 3d ago

Ooo maybe slightly longer than 10 min, I'm just testing another reported issue, but I am working on it now for deployment - will confirm when done and out.
